

Vol.17

Narita Airport Business Co.,LTD.  
Work Report

Vol.17 | January.2025

This time we will introduce our annual sweet potato picking event. 🍠

## What led to this event

This event is held to enjoy the autumn harvest together with employees of Narita Airport Business and related members of Self-Sufficient Farm Milpa, including their families. It also serves as a valuable opportunity for everyone to interact once a year.

## What is "Sukumo-Yaki" Roasted Sweet Potato?

"Sukumo-Yaki" is a traditional method of roasting sweet potatoes. It involves smoking the husks left after threshing and milling rice. Once they turn black and charred, the sweet potatoes are pushed into the embers and roasted. Although it doesn't appear extremely hot at first glance, the temperature is high enough to melt shoes instantly! This special roasting method creates a unique and delicious roasted sweet potato experience.

## Activities

Participants enjoyed a barbecue, a vegetable-rich miso soup, and freshly harvested sweet potatoes roasted on the spot. Everyone had a great time tasting these delicious seasonal treats!

## In the end

This event provided a rare opportunity to interact with people we don't usually connect with and experience the joy of harvesting firsthand. Through physical activity and shared experiences, we were able to enjoy a truly meaningful and memorable time together!
